

WW3 Ideology

Just as earlier humans looked to Nature and viewed its forces and planetary figures and phenomena as gods or the acts of gods, so too can present day peoples come to accept their responsibility for reinterpreting the same observations from a more informed perspective.

There is no absolute reason to believe in or deny the existence of a god or gods which holds humanity in a most favored position of all creatures that may or may not exist in the Universe.

1. A god defined by on observable nature can be labeled a rational belief.

Personal or collective observations are not to be construed as a truth requiring acceptance by everyone.

2. A god defined by supposition can be labeled a metaphysical belief or a guesstimation.

Personal or collective suppositions are not to be construed as a truth requiring acceptance by everyone.

3. A god defined by a single person's Revelation can be labeled a personal experience.

Personal Revelations are not to be construed as a truth requiring acceptance by everyone.

A. **Mathematically speaking**, the concept of god can be viewed as an irrational or imaginary number symbolically represented as:

- A singularity (Monotheism).
- A duality (Ditheism).
- A triplicity (Tritheism).
- Or plurality (Polytheism... more than three).

B. **Philosophically speaking**, the creator of the Shakespearian works can be viewed as:

- A singularity (1-person).
- Duality (2-people).
- Triplicity (3-people).
- Plurality (more than 3-people).

C. **Literature-ally speaking**, the lives and works of Jesus and Mohammed can be viewed as:

- 1 inter-related soap opera.
- 2-separate fairy tales.
- 3-culturally elaborated fictions (Christianity, Islam, Judaism).
- Or a plurality of lies mixed with vagaries of truth.

D. **Religiously speaking**, the concept of a triplet code in DNA and RNA can be viewed as:

- A Monotheistically collective code.
- A Divinely paired-helix code.
- A 3 -to- 1 Trinity code.
- Or as a Polytheistically occurring code.

E. **Naturally speaking**, the concept of the Christian Trinity can be viewed as:

- A symbolic reference to as a single entity with 3 aspects.
- A doublet characterization of the real and fanciful.
- A triplet metaphorical rendering of early solar worship consisting of 3 phases (dawn- noon- dusk).
- Or as a pluralized theism.

F. **Arithmetically speaking**, the human head can be viewed as having:

- 1- whole brain.
- 2- hemispheres brain.
- 3- triune divisions brain.
- Or Many sections brain.

G. **Biologically speaking**, the Bible, the Koran and the Torah can be viewed as having a primitive plant physiology such that together they comprise:

- 1 cell (a singular type of monotheistic consciousness created in a similar desert setting).
- With a 2-part binary fissioning inclination (good/evil, faithful/infidel, moral/immoral, etc...).
- Displaying a 3- chromosomes (triploidy) interactive (collusive) growth pattern (The ideologies collude like 3 businesses).
- From which are created (seeded) multiple mutagenic forms (multiple off-shoots)...

Thus requiring humanity's next Revelatory experience to be an evolutionary progress into a higher life form. All present day Western religions and Eastern philosophies are primitive forms of consciousness. All of them were once Mystery religions which stole (never intending to return) ideas from multiple "Pagan" sources because their originators were not intelligent nor creative enough to produce the formative ideas seen today. (It took hundreds of people over many generations.) Humanity must be forced out of its somnabulance into a level of conscious sobriety which is symbolically described as an Apocalyptic event to take place.
